Introduction {

SpringBank is a banking system developed in Java using Spring Boot. It simulates basic bank operations such as account creation, money transfers, and balance checking. It supports multiple user roles, including Admins and Account Holders, and offers RESTful APIs for interacting with different types of accounts like Checking, Savings, and Credit Card accounts.

}

Technologies used {

01

Java

02

SpringBoot

03

Spring Data JPA

04

Spring Web

05
